## We touch your electricity everyday!

AH-Series

## CS Air Circuit Breakers - AH Series

## Salient Features

- Available in 3 or 4 pole for entire range and also fixed / draw-out version.
- Only 4 frame sizes in the entire range, 630A to 6300A, resulting in maximum interchangeability and minimum inventory of spares.
- High value of service breaking capacity, 45 kA to 100kA, and making capacity, 94.5 kA to 220 kA at 415 V AC.
- Total breaking time less than 30ms (including arcing time of less than 10 ms ) \& closing time of 40 ms .
- Highest values of mechanical and electrical endurance due to robust mechanism design and special sintered metal contacts.
- Neutral pole (in 4 pole) closes early and opens later to prevent transient over voltages in loads connected between live and neutral lines.
- Highest degree of system protection and coordination due to the use of microprocessor based / Intelligent protection releases.
- $\mu$ IT-Standards release
- MicroPro - multi purpose release with RS485 port \& ZSI feature.
- Most simple to operate and maintain.
- High dielectric strength even in hot and humid conditions due to use of class ' $B$ ' and ' $F$ ' insulating materials.
- Fibre glass safety shutter for safety of operating personnel.
- No thermal derating for D.C. Application.
- Tested for most onerous environmental conditions and approved for marine duty application by Indian Registrar of Shipping.

* Rated Service breaking capacity (Ics) \& rated ultimate breaking capacity (Icu) are same except at 415V. For other voltages please contact us.

Higher Breaking Capacity ACB's available on request.

- Thermal Magentic Trip Device: Type TM
- Microprocessor Based Overcurrent Trip Device: Type $\mu \mathrm{IT}$-100 \& $\mu \mathrm{IIT}$-G
- Intelligent Release: Type MicroPro Relay 4.0 \& 4.1

## Thermal - Magnetic Trip Device TM

- Direct acting electromagnetic instantaneous trip device with fixed factory set release, settings 3-50 kA

■ Adjustable overload settings 80\%-120\%.

- Provision for remote tripping / electrical reset as optional features with overload relay.

## Microprocessor Based Overcurrent Trip Device: Type $\mu \mathrm{IT}$-100 \& $\mu \mathrm{IT}$-G

$\mu I T$ is a true RMS sensing overcurrent trip device, requiring no external supply for its basic function. It is available in two types, i.e., $\mu \mathrm{IT}-100$ for industrial application and $\mu \mathrm{IT}-\mathrm{G}$ for generator protection.

- Error free and user friendly setting of current and time delay.
- Provides highest degree of system protection co-ordination.
- Self powered by the built in current transformer.
- Nomal-operation due to external disturbances.
- Built in operation check function.
- Visual fault discrimination by LEDs.
- Three phase and earth fault in one single compact unit.
- Self monitoring of trip unit with blinking indication.
- Function Blocking facility provided.
- Certified by ERTL for
- Damp Heat Test
IS 9000-PG4
- Dry Heat Test

IS 9000 - PG3

- VibrationTest

## Intelligent Release: Type MicroPro

MicroPro is a 3 Phase time overcurrent relay with in built inverse characteristic for overcurrent and definite tripping characteristic for short circuit and earth fault currents. Inverse characteristic can be selected from the wide range of available settings. The settings can be selected by selecting the positions of the rotary switches on the front .The new settings become effective as soon as they are changed when the relay is powered by the CTs. The microcontroller in the relay ensures positive tripping of the MHT coil under any undesired conditions of overload, short circuit or earth fault by giving the trip command as per the selected set of characteristics. There are 5 Red LEDs in the front for each type of fault indication and on occurrence of overload condition, O/L LED flashes once, every second before the tripping command is issued. If the Overcurrent condition cease to exist before the relay trips, LED flashing also stops. A thermal memory is incorporated in the relay and when the Overcurrent condition occurs again, the relay takes into account the earlier overcurrent effect before giving the trip command.

There are two version of MicroPro 4 series

- MicroPro 4.1

MicroPro 5.1

## MicroPro 4.1

Protection thresholds and delays are set using the adjustment dials. The running load is displayed in amperes.
Type of Protection

- Overload protection
- Short Circuit current protection
- Instantaneous current protection
- Ground Fault Protection
- Neutral Protection

Other Features

- Zone Selectivity
- Ampere Meter
- Communication: RS 485, Modbus protocol
- LCD display
- LCD display and fault LED retention in case of power failure

## MicroPro 5.1

Protection thresholds and delays are set using the keypad. The selected value are momentarily displayed in amperes.
Type of Protection

- Overload protection
- Short Circuit current protection
- Instantaneous current protection
- Ground Fault Protection
- Neutral Protection

Other Features

- Zone Selectivity
- Ampere Meter
- Communication: RS 485, Modbus protocol
- LCD display
- LCD display and fault LED retention in case of power failure

## Intelligent Release Characteristics

## Micropro with communication

| Measurements |  |  |
| Load current | Phase, N \& E | Phase, N \& E |
| Fault current | OL, SC, Inst, EF \& N | OL, SC, Inst, EF \& N |
| Communication |  |  |
| To remote | All parameters through communication module | All parameters through communication module |
| Connectivity \& protocol | To SCADA system through MODBUS | To SCADA system through MODBUS |

Inputs : From The CTs with 200mA rated output one for each phase and one for Neutral current measurement.
Output : Tripping signal for MHT coil in the ACB
Red Led : indications for different the types of the fault/tripping such as Over load, Short Ckt, Earth Fault, Instantaneous, Neutral.
Green Led : Power On and Healthy voltage to trip MHT
LCD display : For displaying Currents, and faults/relay status

## Communication Module

Communication module is an accessory of MicroPro Relay and is an optional module for the customer who needs additional features.The module gets connected to Micropro by two wires through general protocol \& through 485 port, can be connected to Master PC. The communication module acts as a master for the MicroPro relay and as a slave to the supervisor PC.

The module can accept 9 different Digital inputs and has two relays inside whose contacts are brought out on the terminals which are D/O types.

There are 3 LEDs on the front indicating status of -

1. Communication between Micro Pro and Comm. Module
2. Communication between Comm. Module and Master PC.
3. Operation of the relay

The module has built in Power supply card. DC supply for the relay can be obtained from this module.

## Operation

When connected to MicroPro and Master PC, Communication Module:

- Can read the settings of the MicroPro .
- Can change the settings of the MicroPro as dictated by Master PC.
- Can record following data related to last 16 faults
a) The type of fault
b) In which phase the fault has occurred
c) At, which instant the fault occurred
d) Fault current.
- Can record the normal currents IR, IY, IB, IE, and IN
- Operates one of the relays whose contacts are available on the terminals as soon as MicroPro exceeds the threshold of the trip.

Because of the above capabilities all the relevant information related to status of the relay can be furnished to the Master. The information can also be used for zone selectivity interlocking by using the contacts of the relevant relay.

## Connections

| Z1~D19 | : Di\& Do outputs |
| :---: | :---: |
| Master D (+) \& Master D (-) | $=$ To be connected with RS 485/232 converter |
| M-PRO D(+) \& M-PRO D(-) | $=$ To be connected with Micro Pro relay communication in ACB |
| ZO/COMMON/DO | $=$ Zoneselectivity |
| O/P + \& GND | $=24 \mathrm{VDC}$ supply can be used for Micro Pro supply |
| 230 V I/P L ....I/P N...I/P E | $=$ Input supply 230 V AC for communication module. Phase to be connected to L \& neutral at N \& earth at E . |

## Power Supply and Relay Module

The module has relay outputs corresponding to the type of fault occurred in the MicroPro. There are total 7 Relays and contact of each relay is available for feeding to alarm annunciator or any other control.

The module has built in Power supply card and DC supply for the relay can be obtained from this module. If the relay card is not used then the module becomes power supply module. The power supply card is common with Communication module

## Operation - PSRM

The PSRM module when connected to Micro pro will get the information of type fault and in which phase the fault has occurred. Corresponding to this a particular relays will operate and the output contacts of the relay will change the status. Through 3 DIP switches, one can block the function. Blocking ensures that the particular output contact corresponding to the function have no effect even if the function in the relay device is activated. The contacts will remain open if DIP switches are used to block the function. There will be option of providing 4 or 7 relays.

## Technical Specifications - PSRM

| Auxiliary Supply | Input: | 24 V DC to 300 V DC or 24 V AC to 240 V AC |
| :---: | :---: | :---: |
|  | Output: | $24 \mathrm{~V} \mathrm{DC} \pm 10 \%$ |
| Relays | Number of relays: | 4 or 7 nos. |
|  | Contact rating: | 125 V AC, 0.6 A or 110V DC 0.6 A |
|  | Contacts: | 1 terminal pair from each relay |
| Extension functions: | Extension provides operation of relays. Signal for such operation are sent by MicroPro on RS485 serial data communication interface. The relays operate on following faults: <br> 1. Over current [l>] <br> 2. Phase current High set [l>>\} <br> 3. Earth Fault [IE>] <br> 4. Neutral Over current [IN>] <br> 5. Circuit Breaker failure [CBF] 6. Pre-trip alarm [W] <br> 7. Spare |  |
| Function blocking: | DIP switches are prov 7 Position DIP swit <br> Case 1: Number of When a switch is in assigned fault occur <br> Case 2: Number of functions can be en <br> For example, if swit I> Relay1 <br> IE> Relay2 <br> W Relay4 | selectively blocking any of the above functions. <br> s follows: <br> Each position corresponds to one of the above functions and in the same sequence. n, the corresponding function is blocked.
